
Access Review

User Guide

What every person sees, and what each button does

This guide walks through the dashboard from the point of view of each kind of user — **Associate**, **Manager**, **Access Management**, **User Directory**, and **Admin / Super User**. For each one it shows the screen you can expect, the information you can see, and exactly what every button does. No technical knowledge is needed.

1 Welcome

The **Access Review** dashboard is where you confirm, every cycle, which client tools you actually used. This is called *attestation*: a quick, regular sign-off that keeps everyone’s access correct and audit-ready.

1.1 What is a “cycle”?

A **cycle** is one review period (it runs roughly every two weeks). Each cycle has a **due date**. During the cycle you go through your list of tools and mark which ones you used. Managers and administrators watch how many people have finished before the due date.

💡 **The whole job, in one sentence:** open the dashboard, mark each tool as *used* or *not used* (or *no access*), add a remark if something looks wrong, then press **Submit attestation**.

1.2 Which role am I?

You don’t choose a role — the system already knows who you are when you sign in. Most people are an **Associate**. Some people are *also* a **Manager**, and a small number are **Super Users** (Admin, GFH, GFH Delegate, or IFH). If you have more than one role, a small set of tabs lets you switch between the views (see Section 3).

📌 Roles at a glance

- **Associate** — everyone. Attest your own tools.
- **Manager** — people who have direct reports. Track and manage your team.
- **Access Management** — grant or remove tool access for your reports.
- **User Directory** — Admins only. A read-only list of all users.
- **Admin Dashboard** — Super Users (Admin / GFH / GFH Delegate / IFH). A department-wide overview.

2 Signing in

When you open the dashboard it checks your company sign-in automatically, so usually you go straight to your dashboard — there is nothing to type.

🖼️ Screenshot

The sign-in screen with the Broadridge “B” logo and “Access Review” title.

(drop the image into figures/ and swap this for \shot)

- If sign-in needs a moment, you’ll see **Checking your access...**
- If it can’t confirm who you are, you’ll see a short message and a **Try again** button. Press it to retry; if it keeps failing, contact the dashboard administrator.

📌 On test machines a **User name / Password** box may appear. On the normal company site you will not see this — your Windows sign-in is used instead.

3 Things you’ll see everywhere

Most screens share the same strip across the top (the **top bar**). Once you know it, every view feels familiar.

 Screenshot

The top bar: logo, cycle picker, view tabs, search, light/dark toggle, profile menu.

(drop the image into figures/ and swap this for \shot)

Control	What it does
Broadridge logo / “Access Review”	Branding. Confirms you’re in the right place.
Cycle picker (e.g. “CYCLE”)	Shows the review period you’re looking at. Click it to switch to a different cycle; each entry shows how many days are left (or how long ago it ended).
View tabs	Only appear if you have more than one role. Lets you jump between Associate view, Manager view, Access, and (Admins only) Users. Super Users also get Admin Dashboard.
Search box	Filters what’s on the current screen — your tools, your team members, or departments, depending on the view.
Light / dark toggle (☾/☀)	Switches the screen between light and dark appearance. Purely visual.
Profile menu	Your initials in a circle. Click for your name, role, and Sign out.

 **Switching roles:** if you’re a Manager or Super User, use the view tabs in the top bar to move between your Associate, Manager, Access, and Admin screens. Switching never loses your work — everything saves as you go.

4 Role 1 — Associate (everyone)

This is the main screen and the one everyone uses. It lists the clients you work with and, under each, the tools you have access to. Your job is to say whether you used each tool this cycle.

 Screenshot

The Associate dashboard: greeting, progress card, and a client with its tools expanded.

(drop the image into figures/ and swap this for \shot)

4.1 The top of the screen

- A friendly greeting and a line such as “*You have 4 tools left to attest before <due date>.*”
- Four quick numbers: **Attested** (done), **Remaining** (still to do), **Clients**, and **Days left**.
- A **Cycle progress** card showing how many of your tools are done out of the total, a percentage, a progress bar, and the **Submit attestation** button.

4.2 Your clients and tools

Each client is a coloured card. Click a card’s header (or the chevron ▼ on the right) to open or close it. The header shows the tool count, how many you’ve marked as used, and how many are still pending.

When open, you see a table with four columns:

Column	What to do with it
Tool	The name of the tool. Nothing to click.
Had access?	A Yes / No switch. Leave it on Yes if you really had access to this tool. Choose No if you should <i>not</i> have had access — this flags a possible access dispute for your manager.
Did you use?	A Yes / No switch — did you actually use this tool this cycle? This is greyed out if you set <i>Had access?</i> to No (you can’t “use” a tool you shouldn’t have).
Remark	A small Add remark button. Use it to leave a note — for example, why a tool was or wasn’t used. If a note already exists, its text shows on the button.

i Everything saves instantly. Each time you flip a switch it is saved straight away — there’s no separate “save” step for individual tools. A tool counts as done once you’ve answered *Did you use?* or marked *Had access?* = *No*.

4.3 Adding a remark

Clicking opens a small window for that one tool.

Screenshot

The remark window with a text box, character counter, Cancel and Save remark buttons.

(drop the image into figures/ and swap this for \shot)

- Type your note (up to 500 characters).
- **Save remark** stores it; **Cancel** closes without changes.
- Leaving the box empty and saving **clears** the remark.
- Remarks are visible to your manager and to audit.

4.4 Submitting

When you’ve gone through your tools, press **Submit attestation** in the progress card. You’ll get a short confirmation message. You can keep updating and submit again if something changes before the due date.

 If you press **Submit** without marking anything, the dashboard reminds you to mark at least one tool first.

 **Search tip:** use the top-bar search to jump to a tool by name — handy if you have many clients.

5 Role 2 — Manager

If you have direct reports, the **Manager view** tab appears in the top bar. This view is about *watching your team’s progress* — you don’t attest on their behalf.

 **Screenshot**
Manager view: summary cards, the team list on the left, and a selected member on the right.
(drop the image into figures/ and swap this for \shot)

5.1 What you see

- A short **Manager view** banner naming the current cycle.
- Four summary cards: **Direct reports**, **Submitted**, **In progress**, **Not started**.
- **Team completion** (left) — a list of your people with a progress bar and a status badge each.
- **Selected member** (right) — details for whoever you click.

5.2 The team list (left panel)

Control	What it does
Filter pills	Everyone , Not started , In progress , Submitted — show only people in that state.
A team-member row	Shows their photo initials, name, ID, progress (e.g. “6/8”), and a status badge. Click a row to load their detail on the right.
Top-bar search	Filter the list by name or associate ID.

5.3 Member detail (right panel)

For the selected person you’ll see their completion percentage, status, and a **per-client progress** breakdown. If they reported any access problems, an **Access disputes** list appears in red with the tool, client, and their remark.

5.4 Exporting disputes

If anyone on your team flagged an access dispute (a *Had access?* = *No*), a red banner appears at the top with an  button. Click it to download a file of those records to follow up on.

Screenshot

The red “access disputes this cycle” banner with the Export disputes button.

(drop the image into figures/ and swap this for \shot)

6 Role 3 — Access Management

The **Access** tab is where managers **grant, time-box, or remove** tool access for their direct reports.

Screenshot

Access management: team list on the left, grant form and active-access table on the right.

(drop the image into figures/ and swap this for \shot)

6.1 Choosing a person

The left sidebar lists your direct reports with a search box at the top. Click a name to manage that person’s access on the right.

6.2 Granting new access

The **Grant new access** form has four fields:

Field	What to enter
Client	Pick the client from the drop-down.
Tool	Pick the tool. (Available only after a client is chosen.)
Access from	The start date. Defaults to today.
Access to (optional)	An end date. Leave blank for open-ended access.

Press  to save. The new access appears in the table below.

6.3 Managing existing access

The **Active access** table lists everything the person currently has:

Column	What it does
Client / Tool	Which access this row is for.
From	The date access started.

Column	What it does
To	An editable end date — change it to time-box the access.
Actions	Clear removes the end date (makes it open-ended); Revoke now ends the access today.

⚠ Revoke now takes effect immediately. Use it when someone should lose access to a tool right away.

7 Role 4 — User Directory (Admins only)

Admins get a

Users

 tab: a **read-only** directory of everyone in the system. There are no edit buttons here — it’s for looking people up.

Screenshot

The User Directory: a searchable table of ID, Full Name, User Name, Department, Manager.
(drop the image into figures/ and swap this for \shot)

- A **search box** filters by name, ID, user name, department, or manager.
- The table columns are **ID**, **Full Name**, **User Name**, **Department**, and **Manager**.
- Clicking a row simply highlights it.

8 Role 5 — Admin Dashboard (Super Users)

Super Users (roles **Admin**, **GFH**, **GFH Delegate**, **IFH**) get the

Admin Dashboard

 — a department-wide overview of how attestation is going.

Screenshot

Admin Dashboard: sidebar, KPI band across the top, and a grid of department cards with donut charts.
(drop the image into figures/ and swap this for \shot)

8.1 What’s on screen

- A **sidebar** on the left with the

Overview

 item, your “Logged in as” badge,

Sign Out

, and (if you’re also a manager) a

Team View

 shortcut back to the manager screen.
- A **top header** with the page title, a **Search departments** box, the **Cycle picker**, a **notifications** bell, the light/dark toggle, and your profile menu.
- A **KPI band** of five numbers: **Associates**, **Associate-Tools**, **Submitted** (with %), **Pending**, and **At Risk Depts**.
- A grid of **department cards**, each with a donut chart, the department’s GFH, a status badge, and a submitted-of-total count.

8.2 Department cards

- The ⓘ icon next to “GFH” opens a small card with the Global Functional Head’s name, email, and office.
- Click anywhere else on a card to **drill into** that department.
- Some cards show a per-client breakdown with mini progress bars underneath.

8.3 Drilling into a department

 Screenshot

Department drill-down: back button, client filter pills, the department header, the Exception Exports card, and manager cards.

(drop the image into figures/ and swap this for \shot)

Control	What it does
 All Departments	Goes back to the department grid.
Filter by client pills	Narrow the figures to a single client, or  .
Completion breakdown bar	Shows Submitted / In Progress / Not Started for the department.
Exception Exports	Two download buttons:  next to <i>Incomplete submissions</i> (people who haven’t finished) and  next to <i>Access disputes</i> (flagged access).
Manager cards	One per manager in the department, each with a donut and a quick info popover (ⓘ) for their email.

8.4 Adding a tool

Admins, GFH, and GFH Delegates see an  button in the header.

 Screenshot

The Add Tool window with Client, Department, and Tool Name fields.

(drop the image into figures/ and swap this for \shot)

- Choose the **Client**, choose the **Department**, and type the **Tool Name**.
-  creates it;  closes without saving.
- Once added, the tool is available for that department’s managers to assign.

8.5 Notifications

The bell (🔔) in the header lists departments that are behind as the due date approaches, plus a cycle reminder. A small number badge shows how many need attention;  clears it.

8.6 How the view differs by role

The Admin Dashboard adjusts to who you are:

Role	Which departments	Extras
Admin	All departments	Full overview, Add Tool , Users directory tab
GFH Delegate	All departments	Same wide view as Admin, plus Add Tool
GFH	Only your own department(s)	Add Tool ; title shows your name and role
IFH	Only your own department(s)	Read/track focus; no Add Tool

9 Quick reference

9.1 Who can see what

View / Action	Assoc.	Mgr	Access	Admin	GFH/IFH
Attest my own tools	✓	✓	✓	✓	✓
Add remarks	✓	✓	✓	✓	✓
See my team's progress		✓		✓	✓
Export team disputes		✓		✓	✓
Grant / revoke access			✓		
User Directory				✓	
Department overview				✓	✓
Add a tool				✓	GFH only

i The tabs you see depend on your roles. Most people only ever see the Associate view. Managers also see Manager and Access. Super Users additionally see the Admin Dashboard, and Admins also see the Users directory.

9.2 Glossary

Term	Meaning
Attestation Cycle	Your sign-off that says which tools you used this cycle.
Had access?	One review period (about two weeks) with its own due date.
Did you use?	Whether you legitimately had access to a tool. “No” raises an access dispute.
Access dispute	Whether you actually used the tool during the cycle.
Remark	A flag that someone had access they shouldn't have — surfaced to managers and admins.
GFH	A free-text note attached to one tool, visible to your manager and audit.
IFH	Global Functional Head — senior owner of a department.
	Functional head with a department-scoped view.

Term	Meaning
Super User	An Admin, GFH, GFH Delegate, or IFH with the Admin Dashboard.

🔗 **Need help?** If something doesn't look right — a missing tool, access you don't recognise, or a screen that won't load — use the *Had access?* = *No* flag and a remark where relevant, and contact your manager or the dashboard administrator.
