Troubleshooting & FAQ 22

Introduction

Access Review is Broadridge BPO's web application for *tool-access attestation*. Periodically (each *review cycle*), every associate is asked to confirm which client applications and tools they still have access to, and which of those they actually used during the cycle. Managers track their team's progress, reconcile any access disputes, and adjust who can use which tool. Oversight roles (GFH, GFH Delegate, IFH, and Admin) monitor completion across departments and export the exceptions that need follow-up.

The result is an auditable record, each cycle, that access granted matches access needed — a core control for client data protection and regulatory compliance.

Key concepts at a glance

Cycle — A defined attestation period with a start date, end date, and *due date* (for example, *Q1 2026 Attestation*, due 16 June 2026). The application always opens on the current cycle; you can switch cycles from the cycle picker.

Client — An external client whose applications your team supports (e.g. *Barclays*, *Marex*, *Natixis*). Client IDs are stored as text to preserve leading zeros.

Tool — A specific application or service used for a client (e.g. *Trade Capture*, *Risk Engine*, *Compliance Portal*).

Attestation — Your confirmation, per tool, of (a) whether you still have access and (b) whether you used it this cycle.

Dispute — A tool you flag as *No access* — you are telling the business that the system shows access you do not actually have (or no longer need). Disputes are surfaced to your manager and to oversight for reconciliation.

Who does what

Role	Primary task in Access Review
------	-------------------------------

Associate	Attest your own tools each cycle (used / not used / no access) and submit.
Manager	Track direct reports' completion; reconcile disputes; grant, time-box, or revoke access.
GFH (Global Functional Head)	Monitor completion for the department(s) you head; add clients/tools.
GFH Delegate	Same organisation-wide visibility as an administrator (minus user administration).
IFH (In-Country Functional Head)	Monitor completion for your department(s) — view only.
Admin	Organisation-wide oversight, client/tool setup, and the user directory.

NOTE

Roles are *additive*. A person can be an associate *and* a manager *and* an oversight role at the same time. The view you land on is your highest role, and you can switch between the views you are entitled to (see the relevant section).

Getting started

Opening the application

Open a web browser (Microsoft Edge or Google Chrome are recommended) and go to:

<http://10.17.69.188/ClientAppAttestation/>

Bookmark this address. The trailing slash matters — always open the URL exactly as shown.

Signing in

Access Review uses your **Windows / company sign-in** automatically. In normal use you will *not* see a login form — the application recognises your Windows account and takes you straight to your dashboard.

If your identity cannot be verified (for example, you are not yet registered in the system, or you opened the site from an unsupported network), you will see the sign-in card in Figure 1. Click **Try again**; if it still fails, contact the dashboard administrator to confirm your account is set up.

Figure 1 — The sign-in card. You normally bypass this automatically via Windows single sign-on; it only appears when your account could not be verified.

IMPORTANT

“We could not verify your sign-in” almost always means your Windows account is not yet mapped to a user record in Access Review, or your browser did not pass your Windows credentials. Try the site in Edge/Chrome on the corporate network first, then raise it with the administrator.

The top bar and navigation

Every screen shares a top bar (Figure 2). From left to right it contains:

- the **Broadridge / Access Review** brand mark;
- the **Cycle picker** — shows the current cycle, its due date, and days remaining; click it to switch to a past or future cycle;
- the **view tabs** (only shown if you have more than the associate role) — **Associate view**, **Manager view**, **Access**, and, for administrators, **Admin Dashboard** and **Users**;
- a **Search** box (filters the current screen);
- a **Theme toggle** (light / dark — see the relevant section);
- your **Profile menu** (name, ID, and *Sign out*).

Figure 2 — The cycle picker open. Each cycle shows its date range and how many days remain until the due date; a tick marks the cycle you are currently viewing.

TIP

Switching cycles changes *everything* on the screen to that cycle's data. If your numbers look unexpected, check which cycle is selected in the picker first.

Switching between your views

If you hold more than one role, use the view tabs in the top bar (or, on the oversight dashboard, the **Associate View / Team View** links in the left sidebar) to move between: the **Associate view** (your own attestations), the **Manager view** (your team), the **Access** screen (granting/revoking), the **Admin Dashboard** (oversight), and the **Users** directory (administrators only).

Associate view — attesting your own access

This is the part of Access Review that every user completes each cycle.

Your dashboard

On opening, the associate dashboard (Figure 3) greets you and summarises the cycle:

- **Headline** — how many tools you still have left to attest before the due date.
- **KPI tiles** — **Attested**, **Remaining**, **Clients**, and **Days left**.
- **Cycle progress** card — your overall completion (e.g. “4 / 5, 80%”) with the **Submit attestation** button.

- **Client cards** — one expandable card per client you have access to, each showing the tool count and how many are still pending.

Figure 3 — The associate dashboard. The amber row is a tool still awaiting an answer; the last client shows one tool marked Not used and one flagged as a No access dispute (with a remark).

Reading the attestation table

Click a client card to expand it. Each tool is one row with four columns (Figure 4):

- Tool** — The application name.
- Confirm Access** — **True** = “yes, I do have access to this tool”. **False** = “no, I do not have (or no longer need) this access” — this raises a *dispute*.
- Did you use?** — **Used** or **Not used** this cycle. This is disabled if you set *Confirm Access* to *False* (you cannot have “used” a tool you say you cannot access).
- Remark** — An optional free-text note — *required* when you flag *No access*.

Figure 4 — A single client's tool table. “Risk Engine” is confirmed but Not used; “Reporting Suite” is a No access dispute carrying a remark.

Attesting a tool — step by step

Expand the client card.

For each tool, set **Confirm Access**:

1.1 Keep it True if you still have (and need) this access.

1.2 Set it to False if you should *not* have this access. The *Did you use?* toggle then greys out, and you must add a remark explaining why (see the relevant section).

For tools you confirmed access to, set **Did you use?** to **Used** or **Not used**.

(Optional) Add a **Remark** on any tool to give your manager or auditor context.

Your changes save automatically as you click — there is no separate “save” step. Rows you have not yet answered are highlighted amber and counted in **Remaining**.

Reporting a tool you should not have (a dispute)

When you set **Confirm Access** to **False**, click the **Remark** button on that row and explain the situation — for example, “I no longer use this tool, please remove my access.” (Figure 5). Remarks are limited to 500 characters and are visible to your manager and to audit.

Figure 5 — The remark editor. Leave the box empty and save to clear an existing remark. A remark is mandatory for every tool you flag as *No access*.

IMPORTANT

You cannot submit until **every** tool you marked *No access* has a remark. The application tells you how many remarks are still missing.

Submitting your attestation

When every tool has an answer (and every dispute has a remark), click **Submit attestation** in the Cycle progress card. After submission:

- the attestation is **locked** — a green banner appears on each client and the toggles become read-only (Figure 6);
- the **Submit** button changes to **Submitted**;
- your manager sees your status flip to *Submitted*.

Figure 6 — A submitted, locked attestation. Everything is read-only and the “submitted and locked” banner is shown. Only a manager can reopen it.

NOTE

Made a mistake after submitting? Ask your manager to **Reopen** your attestation (the relevant section); you can then edit and re-submit.

Dark mode

Use the sun/moon toggle in the top bar to switch between light and dark themes (Figure 7). The choice is purely visual and applies to every screen.

Figure 7 — The associate dashboard in dark mode.

Manager view — tracking your team

Managers see the **Manager view** by default. It answers one question: *is my team done, and what needs my attention?*

Team overview

The manager overview (Figure 8) shows:

- a red **disputes banner** when one or more reports have flagged access disputes this cycle, with an **Export disputes** button;
- **summary tiles** — **Direct reports**, **Submitted**, **In progress**, **Not started**;
- the **Team completion** table — every direct report with a progress bar, a tools count, and a status badge. Filter with **Everyone** / **Not started** / **In progress** / **Submitted**, or search by name or ID.

Figure 8 — The manager overview, with the access-disputes banner, status summary, and the filterable team table.

Inspecting a team member

Click any team member to open the **Selected member** panel (Figure 9). It shows their completion percentage and status, a **per-client progress** breakdown, and — if they reported any — an **Access disputes** list with the tool, client, and the associate's remark.

Figure 9 — Member detail. The selected associate is fully complete, but has one access dispute (“Compliance Portal — Barclays”) that the manager should reconcile.

Reopening a submitted attestation

If a report needs to correct an attestation they already submitted, select them and click **Reopen attestation** (visible only when their status is *Submitted*). Confirm the prompt; the attestation unlocks and the associate can edit and re-submit.

Exporting disputes

Click **Export disputes** (in the banner) to download a spreadsheet of every disputed tool across your team — associate, tool, client, the remark, and contact details — for reconciliation and access removal.

Access management — granting and revoking

The **Access** screen (Figure 10) lets managers control *which tools each direct report can use*. Pick a team member from the left list; their access appears on the right.

Grant new access

CLIENT: Select client... TOOL: Select tool... ACCESS FROM: 06/09/2026 ACCESS TO (OPTIONAL): mm/dd/yyyy

ACCESS TYPE: **Full access** Open access

Tool access

CLIENT	TOOL	FROM	TO	ACTIONS
Barclays (BARCLAYS-US)	Compliance Portal	2026-01-01	mm/dd/yyyy	Revoke now
Barclays (BARCLAYS-US)	Pricing Service	2026-06-09	—	Grant full access
Barclays (BARCLAYS-US)	Reconciliation Hub	2026-01-01	12/31/2026	Clear Revoke now
Marex (MAREX)	Settlement Gateway	2026-01-01	mm/dd/yyyy	Revoke now
Marex (MAREX)	Trade Capture	2026-01-01	mm/dd/yyyy	Revoke now

Figure 10 — Access management for a selected report: the Grant new access form on top, and the current Tool access table below (note the full-access rows, an Open access row, and a row with an end date).

Granting new access

In Grant new access:

Choose a **Client**, then a **Tool**. (You can only grant tools that belong to *your* department.)
 Set **Access from** (defaults to today) and, optionally, **Access to** for time-boxed access. Leave *Access to* blank for open-ended access.
 Choose the **Access type** (Figure 11):

1.3 Full access — access is active immediately.

1.4 Open access — a placeholder for access whose paperwork is still in process. It is marked *pending* until you later grant it fully.

Click **Grant access**.

Grant new access

CLIENT: Barclays (BARCLAYS-US) TOOL: Risk Engine ACCESS FROM: 06/09/2026 ACCESS TO (OPTIONAL): mm/dd/yyyy

ACCESS TYPE: Full access **Open access**

Paperwork in-process — access will be marked as pending until fully granted.

Grant access

Figure 11 — The grant form with Open access selected — used when the access request is still being processed.

Managing existing access

In the **Tool access** table, each row offers:

- **End date** — edit the **To** date to time-box a full-access row; click **Clear** to make it open-ended again.
- **Revoke now** — ends access today (the row is closed out with today's date).
- **Grant full access** — shown on *Open access* rows; promotes a pending placeholder to active, open-ended access.

IMPORTANT

Access scoping is enforced by department: a manager can only grant or change tools that belong to their own department. If a tool you expect is missing from the *Tool* list, it belongs to another department — ask that department's GFH or an administrator to add it.

Oversight dashboards — Admin, GFH, GFH Delegate, IFH

Oversight roles open on the **dashboard** (Figure 12). All four roles share the same layout; they differ in *how much* they can see and *what* they can do.

Figure 12 — The Admin Dashboard: an organisation-wide KPI band, then one card per department with a completion donut and a per-client breakdown.

Dashboard anatomy

- **KPI band** — associates, associate-tool combinations, submitted, pending, and the number of *at-risk* departments in scope.
- **Department cards** — each shows the responsible GFH, a completion donut, a status badge, the submitted/total count, and a per-client completion breakdown. The card colour and status follow the completion thresholds in the relevant section.
- **Search** — filter the visible departments.
- **Cycle picker, notifications, theme, profile** — as on every screen. The notifications bell (Figure 17) flags departments that are behind as the due date approaches.

How the four oversight roles differ

	Admin	GFH Delegate	GFH	IFH
Departments visible	All	All	Own department(s)	Own department(s)
Title shown	“Admin Dashboard”	“Admin Dashboard”	“Name — GFH View”	“Name — IFH View”
Add Client / Add Tool	Yes	Yes	Yes	—
User directory (Users tab)	Yes	—	—	—
Drill-down & exports	Yes	Yes	Yes	Yes

ADMIN & OVERSIGHT ROLES

In plain terms: *Admin* can do everything, including managing user records. *GFH Delegate* sees the whole organisation and can add clients/tools, but cannot administer users. A *GFH* (Global Functional Head) manages the department(s) they head and can add clients/tools there. An *IFH* (In-Country Functional Head) monitors their department(s) but cannot add clients or tools — it is a view-only oversight role.

GFH view (scoped, with setup rights)

A GFH sees only the department(s) they head and the title reads “Name — GFH View” (Figure 13). The **Add Client** and **Add Tool** buttons are available.

Figure 13 — A GFH dashboard scoped to a single department (“International”), retaining the Add Client / Add Tool buttons.

GFH Delegate view (organisation-wide)

A GFH Delegate has the same organisation-wide reach as an administrator and keeps the **Add Client/Add Tool** buttons, but has *no* access to the user directory. The dashboard is titled “Admin Dashboard”; the role badge in the sidebar reads “GFHDelegate” (Figure 14).

Figure 14 — A GFH Delegate sees every department, like an administrator. The sidebar role badge (lower left) distinguishes the delegate from a full administrator.

IFH view (scoped, view-only)

An IFH sees only their department(s), titled “Name — IFH View”, and has *no* **Add Client/Add Tool** buttons (Figure 15).

Figure 15 — An IFH dashboard — scoped like a GFH, but without client/tool setup buttons.

Drilling into a department

Click a department card to drill in (Figure 16). You get:

- a breadcrumb (**All Departments**) to go back, and a **Filter by client** row;
- a department header with the *completion breakdown* bar and donut;
- an **Exception Exports** card — download **Incomplete submissions** (associates who have not finished) and **Access disputes** (tools reported as *No access*);
- a **Managers** grid — each manager's completion. Click a manager to drill further into their associates.

Figure 16 — Department drill-down: completion breakdown, the Exception Exports card, and the managers grid.

Notifications

The bell in the top bar opens the notifications panel (Figure 17), which highlights departments falling behind as the due date nears, plus a cycle reminder. Use **Mark all read** to clear the badge.

Figure 17 — The notifications panel.

Adding clients and tools (Admin / GFH / GFH Delegate)

Add a client. Click **Add Client**, enter a **Client ID** (text — leading zeros are preserved, e.g. “0039”) and a **Client Name**, then **Add Client** (Figure 18).

Figure 18 — The Add Client dialog.

Add a tool. Click **Add Tool**, choose the **Client** and the **Department** the tool belongs to, type the **Tool Name**, then **Add Tool** (Figure 19). The tool then becomes available for managers in that department to assign.

Figure 19 — The Add Tool dialog. The department determines which managers can later grant the tool.

User directory (Administrators)

Administrators can open the **Users** tab for a read-only directory of everyone in the system (Figure 20): associate ID, full name, user name, department, and manager. Use the search box to filter by name, ID, user name, department, or manager.

IMPORTANT

Changing a user's **Manager** immediately moves them into that manager's team for tracking and access management. Changing the **Department** affects which tools can be granted to them.

Reference

Completion status thresholds

Department and manager completion is colour-coded by percentage:

Status	Completion
At Risk	below 50%
Below Target	50% – 74%
On Track	75% – 89%
Completed	90% and above

Associate / team-member status is reported as **Not started** (nothing answered), **In progress** (some answered), or **Submitted** (all answered / locked).

Role & permission matrix

Capability	Assoc.	Mgr	IFH	GFH	Admin/Del.
Attest own tools	✓	✓	✓	✓	✓
Track a team	—	✓	—	—	—
Grant / revoke access	—	✓	—	—	—
Reopen a submission	—	✓	—	—	—
Department oversight dashboard	—	—	✓	✓	✓
Add clients / tools	—	—	—	✓	✓
Org-wide visibility	—	—	—	—	✓
Edit the user directory	—	—	—	—	Admin only

Mgr capabilities also apply to any oversight user who happens to manage a team. “Admin/Del.” = Admin and GFH Delegate; only a full Admin can edit the user directory, and only a full Admin sees the whole organisation *and* the user directory.

Glossary

Attestation — A user's per-tool confirmation of access and usage for a cycle.

Cycle — A dated attestation period with a due date.

Client — An external client supported by the BPO operation.

Tool — An application/service used for a client.

Dispute / No access — A tool the user states they should not have; requires a remark.

Full access — Active access to a tool.

Open access — A pending access placeholder (paperwork in process), not yet active.

GFH — Global Functional Head — owns oversight (and setup) for a department.

GFH Delegate — An organisation-wide delegate of the GFH function, without user administration.

IFH — In-Country Functional Head — view-only department oversight.

Admin — Full administrator: org-wide oversight, setup, and user administration.

Troubleshooting & FAQ

"We could not verify your sign-in." — Your Windows account is not yet linked to an Access Review user, or your browser did not pass your corporate credentials. Use Edge/Chrome on the corporate network and click **Try again**; if it persists, contact the administrator.

The page loads but shows no data / 404s. — Make sure you opened the exact URL <http://10.17.69.188/ClientAppAttestation/> (including the trailing slash).

I can't click Submit. — Every tool must have an answer, and every *No access* tool must have a remark. The app shows how many items still need attention.

My attestation is locked. — You have already submitted. Ask your manager to **Reopen** it, then edit and re-submit.

A tool I need to grant isn't in the list. — Tools are scoped to a department. Ask that department's GFH or an administrator to add it.

My numbers look wrong. — Check the cycle picker — you may be viewing a different cycle.

— End of guide — For access or account issues, contact your Access Review administrator.
